Dedicated to our families

Foreword

Pacemaker technology has evolved rapidly over the nearly 40 year history of the device. On several occasions over the past decade, I have heard individuals involved in some aspect of cardiac pacing, state that pacemaker technology had reached the end of its developmental stage and no further improvements should be anticipated. Conversely, I've also heard many far-sighted individuals discuss potential pacemaker features and applications that seemed far-fetched. The latter group have been vindicated as pacemaker technology continues to advance. In such a dynamic field, it is crucial that state-of-the-art information exists and that it is provided in an understandable format.

In the course of our medical library acquisitions, many of us have purchased a medical textbook based upon the title that promises „state-of-the-art“ information, only to be disappointed when the text fails to adequately deliver the expected information. Anyone who reads „*Cardiac Pacing in Clinical Practice*“, whether cover-to-cover or used as a reference for management of clinical pacing problems, will find that the text fulfills all expectations. Drs. Ritter and Fischer have provided a comprehensive, understandable, state-of-the-art guide to clinical management of the pacemaker patient that can be appreciated by both physician and allied professional.

Preparation of such a comprehensive text by only two authors is an arduous task. However, the benefits of limited authorship is evident as one reads this book. There is a consistent style throughout in both text and graphics. This avoids redundancy and facilitates comprehension. In addition, the consistent writing style allows the authors to build on complexity from the beginning to end of each chapter. For example, the description of pacemaker system implantation encompasses the most basic portions, such as attaching the lead to the pulse generator, as well as less commonly encountered aspects such as pacemaker implantation in the cardiac transplant patient.

The extensive clinical experience of the authors is clearly evident. Every chapter is complete and up-to-date, from the description of the newer combipolar pacing configuration to new indications for pacing, and the extensive glossary and index makes it easy to seek answers to specific clinical questions. Readers who are involved in the day-to-day care of the pacemaker patient will find several chapters particularly helpful. The extensive discussion of pacing modes and their application allows a logical approach to individualizing pacemaker pre-

scriptions. An exhaustive guide to patient follow-up and programming is provided. Thorough knowledge and understanding of this text should allow providers to avoid complications in their practice. However, in the event that a patient with a complication is referred for treatment, practical management guidelines for everything from hematoma formation to Accufix™ lead management is included.

It is highly likely that this text will prove to be an enduring source of information in the field of cardiac pacing, providing an inclusive guide with an international perspective. Those of us dedicated to providing expert care in the arena of cardiac pacing, are hopeful that many countries will eventually develop and apply standards of care for the paced patient. Ritter and Fischer provide a work that could serve as a basis for such standards.

David L. Hayes, MD

Acknowledgements

This book is the result of an intensive collaboration between scientists, engineers, and physicians from separate institutions, cities, countries, and continents.

Ms. Monika Schrimpf of Springer-Verlag deserves a great deal of credit for her assistance and organization and Ms. Ursula Appl, Dipl.-Ing., for the excellent and expert translation she provided the authors with.

Furthermore, we gratefully acknowledge the invaluable assistance of Prof. Werner Irnich; both his counsel and his review of the whole book with regard to its physics and correct use of terminology are much appreciated.

We owe many thanks to Ulf H. Knabe, MD, for his helpful input and proof-reading of the sections on surgery and to Martin R. Locher for his valuable editorial contributions to the German edition during its extensive revision.

Thanks are also due to Kaoru Kunisada, MD, Japan, for his fine cooperative efforts.

Special thanks also go to Bernard Dodinot, MD, Editor in Chief of *Stimucoeur Stimulography*, for giving us permission to reproduce a great number of the figures included in this book; to Rodolfo Ruffy, MD, Cardioscript International, for the very professional translation of this book from the German and French, and for his corrections and advice; to David Hayes, MD, for kindly writing the foreword; and to Jacques Mugica, MD, and Prof. Claude Daubert, MD, for their great help in making this work possible.

Introduction: A Short History of Cardiac Pacing	1
1 Brief Review of the Anatomy, Electrophysiology and Pathophysiology of the Cardiac Conduction System	
1.1 Anatomy and Electrophysiology	5
The Sinoatrial Node	5
The Atrioventricular Node	6
The His Bundle	7
The Purkinje Network	7
Automatic Foci	8
Anterograde and Retrograde Conduction	8
Refractory Periods of the Heart	9
The Absolute Refractory Period	9
The Relative Refractory Period	9
Refractory Periods in Various Cardiac Tissues	10
1.2 The Main Depolarization and Conduction Disorders	11
Sinus Node Disease (the Sick Sinus Syndrome)	11
Chronotropic Incompetence	11
Atrial Tachyarrhythmias	11
Electrophysiological Testing	11
Atrioventricular and Intraventricular Conduction Disorders	14
Atrioventricular Block (AVB)	14
Bundle Branch Blocks	16
2 General Technical Concepts	
2.1 How to Stimulate the Heart	19
Basic Principles of Electricity	20
Pacing Threshold	21
Influence of Pacing Rate	24
Influence of Drugs and Metabolic Disorders	25
Influence of Degree of Fibrosis	25
Influence of Electrode Configuration on Pacing Impedance and Pacing Threshold	25

Influence of Polarity	26
Influence of the Pacing Stimulus Waveform	26
Sensing	27
The Frequency Spectrum	27
The Slew Rate	28
Signal Amplitude	30
2.2 The Pulse Generator	33
Sources of Pacing Power	33
The Pacemaker Components	36
Pacemaker Longevity	38
2.3 Programming and Telemetry	40
Programming	40
Telemetry	43
2.4 The Pacing Lead	44
The Connector	44
The Conductor	45
The Insulation	45
The Electrode	46
Fixation Methods	47
Unipolarity Versus Bipolarity	48
Combipolar Concept	53
 3 The Pacing Modes	
3.1 The International Code	54
3.2 The Various Types of Pacemakers and Their Programmable Functions	57
Terminology	59
Demand Versus Fixed Rate Pacing	59
Rate Versus Pacing Cycle and Versus Escape Interval	61
Single Chamber Pacemakers	62
SSI Mode Without Rate Responsiveness	62
The SST Mode	75
The Asynchronous (S00) Mode	78
Dual Chamber Pacemakers	78
The DDD Mode	79
Automatic Mode Switch AAI/DDD	106
The DDI Mode	106
The D00 Mode	112
Other Modes of Dual Chamber Pacing	112
The VDD(R) Mode	116
Rate Responsive Pacemakers	120
The Various Sensors	121
Dual Sensor Pacemakers	138

Integration of Rate Responsiveness in Single and Dual Chamber Pacemakers	139
Antitachycardia Pacing	144
Atrial Tachyarrhythmias Prevention	144
Protection Against Sustained Atrial Tachyarrhythmias	146
Multimode Switch	155
Role of Antitachycardia Pacing in Permanent Cardiac Pacing	155
4 Indications for Permanent Pacing and Choice of Pacemaker	166
4.1 History and Investigation	167
Clinical History	167
Physical Examination	168
Resting and Ambulatory Electrocardiogram	168
Exercise Testing	168
Atropin Test	168
Carotid Sinus Massage	169
Upright Tilt-Table Testing	169
Invasive Testing	169
4.2 Temporary Cardiac Pacing	170
Indications	170
Techniques of Temporary Pacing	172
Mechanical Stimulation	172
Transcutaneous Electrical Stimulation	172
Transesophageal Stimulation	173
Endocardial Stimulation	173
Transthoracic Pacing	174
4.3 Permanent Cardiac Pacing	175
Pacing Indications Based on Abnormal Electrocardiogram	175
Sino-Atrial Dysfunction	175
Atrioventricular Block	176
Bi- and Trifascicular Blocks	178
Bradyarrhythmia in the Presence of Atrial Fibrillation	178
Indications for Permanent Pacing in the Pediatric Patient	179
Indications for Implantation of a Permanent Pacemaker for Sino-Atrial and Intraventricular Conduction Disturbances After Acute Myocardial Infarction	179
Indications for Permanent Pacing in Cases of Syncope with Normal or Near Normal Electrocardiogram	180
Intrahisian Block	180
Carotid Sinus Syndrome	180
Vaso-Vagal Syndrome	181
Unexplained Syncope	181
Bradyarrhythmias Following Heart Surgery	182
New Indications	183

Complete Heart Block Induced by His Bundle Ablation	183
Obstructive Hypertrophic Cardiomyopathy	183
Prevention of Atypical Atrial Flutter	183
Non-Obstructive, Dilated Cardiomyopathy	184
4.4 Choice of Pacemaker Model	185
Physiology of the Paced Patient	185
Heart Rate Increase with Exercise	186
Atrioventricular Synchrony	186
Optimization of Atrioventricular Synchrony	189
Ventricular Contraction Synchrony	192
Atrial Resynchronization	195
Advantages and Disadvantages of Various Pacing Modes	196
Pure Atrial Modes	196
Pure Ventricular Modes	198
The Dual Chamber Modes	199
Pacing Mode Selection	200
For Pure Sinus Node Dysfunction	200
For Isolated Atrioventricular Block	201
For Binodal Disease (Sinus Node Dysfunction Plus at Least First Degree AV Block)	201
For Chronic Atrial Fibrillation with Ventricular Bradyarrhythmia	201
For Carotid Sinus Syndrome or Vaso-Vagal Syndrome	201
 5 Implantation Techniques	
5.1 Preparation of the Patient	203
Patient Information	203
Requirements of the Procedure	203
Implant Facilities	204
The Implantation Site	204
Preoperative Preparation	204
Choice of Implant Instrumentation	205
Anesthesia	206
5.2 System Implantation	206
Venous Access	206
Lead Placement	211
Intraoperative Measurements	218
Sensing	219
Pacing	222
Verification of Absence of Diaphragmatic Pacing and Lead Stability	222
Attachment and Connections of the Leads	223
The Post-Implant Period	227
5.3 Pacemaker Implant in the Pediatric Patient	228
5.4 Pacemaker Implantation in the Cardiac Transplant Patient	229

5.5 Pacemaker Implantation in Special Cases	230
Presence of a Left Superior Vena Cava	230
Right Heart Chambers Dilatation	230
Tricuspid Annuloplasty or Prosthetic Tissue Valves	231
Planned Cardiac Surgery	231
Biatrial Pacing	231
Left Ventricular Pacing	234
6 Complications	
6.1 Intra- and Postoperative Complications	237
Complications at the Implant Site	238
Hematoma	238
Pectoral Stimulation	238
Infection	239
Complications Related to Vascular Access	239
Lead Implantation in a Left-Sided Chamber	239
Pneumothorax, Hemothorax and Hemomediastinum	240
Air Embolism	241
Venous Thrombosis	241
Cardiac Complications	241
Rhythm Disturbances	241
Asystole	242
Myocardial Perforation and Tamponnade	242
Complications Related to the Pacing System	243
Diaphragmatic Pacing	243
Lead Dislodgment	243
Pacing and Sensing Threshold Rise	245
Postoperative Autonomic Dysregulation	246
6.2 Late Complications	246
Local or Regional Complications Related to the Site of Implantation	246
Infection	246
Migration of the Pacemaker Can	247
Pacemaker Pocket Erosion	247
Venous Thrombosis	248
Lead-Related Complications	249
Secondary Dislodgment	249
Changes in Pacing and Sensing Threshold	249
Insulation Failure	250
Interruption of Electrical Continuity	252
Mechanical Complication Related to the Lead	255
Recommendations Relative to the Accufix and Encor Leads	255
6.3 Complications Related to the Pulse Generator	
or the Programmed Mode	256
Sources of Interference	256

Endogenous Interference	256
Exogenous Interference	257
Changes in Pacing Rate	262
Shut Down	262
Battery Depletion	262
 7 Patient Follow-Up	
7.1 General Principles	263
7.2 Simple Follow-Up	265
History	265
Syncope and Near Syncope	265
Dyspnea	266
Palpitation	267
Chest Pain	268
Pectoral Stimulation	268
Diaphragmatic Stimulation	269
Physical Examination	269
Resting Electrocardiogram	269
Verification of Proper Pacing Function	271
Verification of Proper Sensing	272
Elective Replacement Determination	272
Transtelephonic Interrogation	274
7.3 Comprehensive Follow-Up	274
Telemetry	275
Is the Device Programming Identical to What It Was at the Last Visit? ..	275
Battery Status and End of Life Indicators	280
Information Stored in the Pacemaker's Memory	284
Electrical Integrity of the Lead System	298
Intracardiac Events Displayed by the Pacemaker	302
Economy of Energy Consumption	304
Final Interrogation	304
Results of Long-Term Diagnostic Data	305
 8 Practical Guide to Programming	309
8.1 Programming of a Single Chamber Pacemaker	311
Sensing	311
Pacing	321
Escape and Pacing Interval Setting	325
Refractory Period	326
 8.2 Programming of a Dual Chamber Pacemaker	331
Identification of the Atrial and Ventricular Pacing Spikes	331
Atrial Sensing	331

Ventricular Pacing	337
Atrial Pacing	337
Ventricular Sensing	344
Atrioventricular Crosstalk	349
Ventriculo-Atrial Crosstalk	349
AVD After Paced Versus Sensed P Wave (AV Hysteresis)	349
Atrioventricular Delay (AVD)	356
The Postventricular Atrial Refractory Period (PVARP)	359
Other Parameters	362

9 Pulse Generator and/or Lead Replacement

9.1 Reasons for Replacement of the Implanted Material	368
Indications for Replacement of the Pulse Generator	368
Indications for Lead Replacement	369
Grounds for Changing the Pacing Mode	369
9.2 Reintervention Techniques	370
Preparation	370
The Procedure	370
Connection Problems	373
Reinterventions in Presence of Infection	375
General Strategy	375
Lead Extraction	377

ERI	Elective replacement indicator		

1 For abbreviations of the International Pacemaker Code, see foldout table at back of book. ECG uses the signals P–U in accordance with Einthoven; these abbreviations are not listed here. The symbols A, P, V, R are used in the terminology of cardiac pacing to distinguish the following: A atrial stimulus; P atrial spontaneous event; V ventricular stimulus; R ventricular spontaneous event

mV	Millivolt	PVC	Premature ventricular contraction
MV	Minute ventilation	RAM	Random access memory
μ A	Microampere	RBBB	Right bundle-branch block
μ J	Microjoule	ROM	Read only memory
μ T	Microtesla	RRT	Recommended replacement time
NASPE	North American Society of Pacing and Electrophysiology	SACT	Sinoatrial conduction time
NBG code	NASPE/BPEG generic pacemaker code	SNRT	Sinus node recovery time
O ₂	Oxygen	SR	Sinus rhythm
Ω	Ohm	SSS	Sick sinus syndrome
PAC	Premature atrial contraction	SVT	Supraventricular tachycardia
PMT	Pacemaker mediated tachycardia	TARP	Total atrial refractory period
PPM	Pulses per minute	UR	Upper rate
PSA	Pacer system analyzer	URI	Upper rate interval
PTT	Partial thromboplastin time	V	Volt
PVARP	Postventricular atrial refractory period	VA	Ventriculo-atrial
PVB	Premature ventricular beat	VES	Ventricular extrasystole
		VS-1	Voluntary standard No. 1
		WPW	Wolff-Parkinson-White syndrome
